1 Introduction to Oracle Data Guard

Objectives 1-2

What Is Oracle Data Guard? 1-3

Types of Standby Databases 1-4

Types of Data Guard Services 1-6

Role Transitions: Switchover and Failover 1-7

Oracle Data Guard Broker Framework 1-9

Choosing an Interface for Administering a Data Guard Configuration 1-10

Oracle Data Guard: Architecture (Overview) 1-11

Primary Database Processes 1-12

Standby Database Processes 1-13

Physical Standby Database: Redo Apply Architecture 1-14

Logical Standby Database: SQL Apply Architecture 1-15

Automatic Gap Detection and Resolution 1-16

Data Protection Modes 1-17

Data Guard Operational Requirements: Hardware and Operating System 1-19

Data Guard Operational Requirements: Oracle Database Software 1-20

Benefits of Implementing Oracle Data Guard 1-21

Quiz 1-22

Summary 1-24

Practice 1: Overview 1-25

2 Oracle Net Services in a Data Guard Environment

Objectives 2-2

Oracle Net Services Overview 2-3

Configuring Oracle Net Services in a Data Guard Environment 2-4

Understanding Name Resolution 2-5

Local Naming Configuration Files 2-6

Connect-Time Failover: Planning for Role Reversal 2-8

Listener Configuration: listener.ora 2-9

Dynamic Service Registration 2-10

Static Listener Entries: listener.ora 2-11

Optimizing Oracle Net for Data Guard 2-12

Quiz 2-14

Summary 2-16

Practice 2: Overview 2-17

3	Creating a Physical Standby Database by Using SQL and RMAN Commands	
	Objectives	3-2
	Steps to Create a Physical Standby Database	3-3
	Preparing the Primary Database	3-4
	FORCE LOGGING Mode	3-5
	Database Nologging Enhancements	3-6
	Configuring Standby Redo Logs	3-7
	Standby Redo Log Usage	3-8
	Using SQL to Create Standby Redo Logs	3-9
	Viewing Standby Redo Log Information	3-10
	Setting Initialization Parameters on the Primary Database to Control Redo Transport	3-11
	Setting LOG_ARCHIVE_CONFIG	3-12
	Setting LOG_ARCHIVE_DEST_n	3-14
	Specifying Role-Based Destinations	3-15
	Combinations for VALID_FOR	3-17
	Defining the Redo Transport Mode	3-18
	Setting Initialization Parameters on the Primary Database	3-19
	Specifying Values for DB_FILE_NAME_CONVERT	3-20
	Specifying a Value for STANDBY_FILE_MANAGEMENT	3-22
	Specifying a Value for FAL_SERVER	3-23
	Example: Setting Initialization Parameters on the Primary Database	3-24
	Creating an Oracle Net Service Name on Primary for Your Physical Standby Database	3-25
	Creating a Listener Entry for Your Standby Database	3-26
	Copying Your Primary Database Password File to the Physical Standby Database Host	3-27
	Creating an Initialization Parameter File for the Physical Standby Database	3-28
	Creating Directories for the Physical Standby Database	3-29
	Starting the Physical Standby Database	3-30
	Creating an RMAN Script to Create the Physical Standby Database	3-31
	Creating the Physical Standby Database	3-33
	Real-Time Apply (Default)	3-34
	Starting Redo Apply in Real Time	3-36
	Preventing Primary Database Data Corruption from Affecting the Standby Database	3-37
	Detecting Lost Writes with DBMS_DBCOMP.DBCOMP	3-39
	DBMS_DBCOMP.DBCOMP Usage Cases	3-40
	Creating a Physical Standby Database by Using Enterprise Manager	3-42
	Using the Add Standby Database Wizard	3-43
	Creating a Data Guard Standby by Using DBCA	3-44
	Example: Physical Standby Creation	3-45
	Creating a Physical Standby by Using SQL	3-46

Standby Database on the Same System 3-47

Quiz 3-48

Summary 3-50

Practice 3: Overview 3-51

4 Managing Physical Standby Files After Structural Changes on the Primary Database

Objectives 4-2

Scenario 1: Adding a Data File or Creating a Tablespace 4-3

Action Required on Physical Standby 4-4

Scenario 2: Using Transportable Tablespaces with a Physical Standby Database 4-5

Action Required on Physical Standby 4-6

Scenario 3: Renaming a Data File in the Primary Database 4-7

Action Required on Physical Standby 4-8

Scenario 4: Adding or Dropping a Redo File Group 4-10

Action Required on Physical Standby 4-11

Scenario 5: NOLOGGING or Unrecoverable Operations 4-12

Action Required on Physical Standby 4-13

Scenario 6: Resetting the TDE Master Encryption Key 4-17

Scenario 7: Refreshing the Password File 4-18

Scenario 8: Controlling PDB Replication 4-19

Example: ENABLED_PDBS_ON_STANDBY 4-20

Scenario 9: Instantiating a PDB on a Standby 4-21

Quiz 4-23

Summary 4-26

Practice 4: Overview 4-27

5 Using Oracle Active Data Guard: Supported Workloads in Read-Only Standby

Objectives 5-2

Oracle Active Data Guard 5-3

Using Real-Time Query 5-4

Enabling Real-Time Query 5-5

Disabling Real-Time Query 5-6

Checking the Standby's Open Mode 5-7

Understanding Lag in an Active Data Guard Configuration 5-8

Monitoring Apply Lag: V\$DATAGUARD_STATS 5-9

Monitoring Apply Lag: V\$STANDBY_EVENT_HISTOGRAM 5-10

Allowed Staleness of Standby Query Data 5-11

Configuring Zero Lag Between the Primary and Standby Databases 5-12

Setting STANDBY_MAX_DATA_DELAY by Using an AFTER LOGON Trigger 5-13

Example: Setting STANDBY_MAX_DATA_DELAY by Using an AFTER LOGON

Trigger 5-14

- Forcing Redo Apply Synchronization 5-15
- Creating an AFTER LOGON Trigger for Synchronization 5-16
- DDL on Global Temporary Tables 5-17
- DML on Global Temporary Tables 5-18 DML/
- DDL on Private Temporary Tables 5-19
- Creating a Private Temporary Table 5-20
- Support for Global Sequences 5-21
- Support for Session Sequences 5-22
- Benefits: Temporary Undo and Sequences 5-23
- DML Operations on Active Data Guard Standby Databases 5-24
- Configuring Automatic Redirection of DML operations 5-25
- Example: Performing DML on a Physical Standby 5-26
- PL/SQL Operations on Active Data Guard Standby Databases 5-27
- IM Column Store in an Active Data Guard Standby Database 5-28
- Quiz 5-29
- Summary 5-31
- Practice 5: Overview 5-32

6 Using Oracle Active Data Guard: Far Sync and Real-Time Cascading

- Objectives 6-2
- Oracle Active Data Guard 6-3
- Oracle Data Guard: Far Sync 6-4
- Far Sync: Redo Transport 6-5
- Far Sync: Alternate Redo Transport Routes 6-7
- Far Sync Instance Creation by Using RMAN 6-8
- Far Sync Instance Creation by Using SQL 6-10
- Benefits: Far Sync 6-11
- Far Sync: Alternate Design 6-12
- Real-Time Cascade 6-13
- Traditional Multi-Standby Database Architecture 6-14
- Benefits: Real-Time Cascade 6-15
- Quiz 6-16
- Summary 6-17
- Practice 6: Overview 6-18

7 Creating and Managing a Snapshot Standby Database

- Objectives 7-2
- Snapshot Standby Databases: Overview 7-3
- Snapshot Standby Database: Architecture 7-4
- Converting a Physical Standby Database to a Snapshot Standby Database 7-5
- Activating a Snapshot Standby Database: Issues and Cautions 7-6

Snapshot Standby Database: Target Restrictions 7-7
Viewing Snapshot Standby Database Information 7-8
Snapshot Standby Space Requirements 7-9
Activating a Snapshot Standby Database: Issues and Cautions 7-10
Quiz 7-11
Summary 7-12
Practice 7: Overview 7-13

8 Creating a Logical Standby Database

Objectives 8-2
Benefits of Implementing a Logical Standby Database 8-3
Logical Standby Database: SQL Apply Architecture 8-5
SQL Apply Process: Architecture 8-6
Preparing to Create a Logical Standby Database 8-7
Unsupported Objects 8-8
Unsupported Data Types 8-9
Identifying Internal Schemas 8-10
Checking for Unsupported Tables 8-11
Checking for Tables with Unsupported Data Types 8-12
SQL Commands That Do Not Execute on the Standby Database 8-13
Unsupported PL/SQL-Supplied Packages 8-14
Ensuring Unique Row Identifiers 8-15
Adding a Disabled Primary Key RELY Constraint 8-17
Creating a Logical Standby Database by Using SQL Commands 8-18
Step 1: Create a Physical Standby Database 8-19
Step 2: Stop Redo Apply on the Physical Standby Database 8-20
Step 3: Prepare the Primary Database to Support Role Transitions 8-21
Step 4: Build a LogMiner Dictionary in the Redo Data 8-22
Step 5: Transition to a Logical Standby Database 8-23
Step 6: Open the Logical Standby Database 8-24
Step 7: Verify That the Logical Standby Database Is Performing Properly 8-25
Creating a Logical Standby Database by Using Enterprise Manager 8-27
Using the Add Standby Database Wizard 8-28
Securing Your Logical Standby Database 8-31
Automatic Deletion of Redo Log Files by SQL Apply 8-32
Managing Remote Archived Log File Retention 8-33
Creating SQL Apply Filtering Rules 8-34
Deleting SQL Apply Filtering Rules 8-35
Viewing SQL Apply Filtering Settings 8-36
Using DBMS_SCHEDULER to Create Jobs on a Logical Standby Database 8-37
Quiz 8-38

Summary 8-40

Practice 8: Overview 8-41

9 Oracle Data Guard Broker: Overview

Objectives 9-2

Oracle Data Guard Broker: Features 9-3

Data Guard Broker: Components 9-4

Data Guard Broker: Configurations 9-5

Data Guard Broker: Management Model 9-6

Data Guard Broker: Architecture 9-7

Data Guard Monitor: DMON Process 9-8

Benefits of Using the Data Guard Broker 9-9

Comparing Configuration Management With and Without the Data Guard Broker 9-10

Data Guard Broker Interfaces 9-11

Broker Controlled Database Initialization Parameters 9-12

Using the Command-Line Interface of the Data Guard Broker 9-13

Using Oracle Enterprise Manager Cloud Control 9-16

Data Guard Overview Page 9-17

Benefits of Using Enterprise Manager 9-18

Quiz 9-19

Summary 9-21

10 Creating a Data Guard Broker Configuration

Objectives 10-2

Data Guard Broker: Requirements 10-3

Data Guard Broker and the SPFILE 10-5

Data Guard Monitor: Configuration File 10-7

Data Guard Broker: Log Files 10-8

Creating a Broker Configuration 10-9

Clear Redo Transport Network Locations on Primary 10-10

Connecting to the Primary Database with DGMGRL 10-11

Defining the Broker Configuration and the Primary Database Profile 10-12

Adding a Standby Database to the Configuration 10-13

Adding a Far Sync to the Configuration 10-14

Enabling the Configuration 10-15

Broker Support for Complex Redo Routing 10-16

Defining RedoRoutes by Using DGMGRL 10-17

RedoRoutes Usage Guidelines 10-18

How to Read Redo Routing Rules 10-19

Far Sync Example with RedoRoutes 10-20

Changing Database Properties and States 10-21

Managing Redo Transport Services by Using DGMGRL 10-22
Managing the Redo Transport Service by Using the LogXptMode Property 10-26
Setting LogXptMode to ASYNC 10-27
Setting LogXptMode to FASTSYNC 10-29
New Commands to Set, Modify, and Display the Initialization Parameters: 10-30
The EDIT DATABASE SET PARAMETER Command 10-31
The EDIT DATABASE RESET PARAMETER Command 10-32
The EDIT DATABASE FAR_SYNC RESET PARAMETER Command 10-33
The EDIT RECOVERY_APPLIANCE SET PARAMETER Command 10-34
The EDIT RECOVERY_APPLIANCE RESET PARAMETER Command 10-35
The SET TRACE_LEVEL Command 10-36
Example: SET TRACE_LEVEL command 10-37
The EDIT FAR_SYNC SET PARAMETER Command 10-39
Data Guard Broker Deprecated and Desupported Properties 10-40
Export Broker Configuration 10-42
Import Broker Configuration 10-43
Disabling Broker Management of the Configuration or Standby Database 10-44
Removing the Configuration or Standby Database 10-45
Quiz 10-46
Summary 10-48
Practice 10: Overview 10-49

11 Monitoring a Data Guard Broker Configuration

Objectives 11-2
Monitoring the Data Guard Configuration by Using Enterprise Manager Cloud Control 11-3
Viewing the Data Guard Configuration Status 11-4
Monitoring Data Guard Performance 11-5
Viewing Log File Details 11-6
Enterprise Manager Metrics and Alerts 11-7
Data Guard Metrics 11-8
Managing Data Guard Metrics 11-9
Viewing Metric Value History 11-10
Viewing Data Guard Diagnostic Information 11-11
Using Monitorable Database Properties to Identify a Failure 11-13
Using the SHOW CONFIGURATION DGMGRL Command to Monitor the
Configuration 11-14
Using the SHOW DATABASE VERBOSE DGMGRL Command to Monitor the
Configuration 11-15
The VALIDATE DATABASE DATAFILE Command 11-17
New Data Guard Broker Commands: VALIDATE DATABASE SPFILE 11-19
New Data Guard Broker Commands: VALIDATE NETWORK CONFIGURATION 11-20

New Data Guard Broker Commands: VALIDATE STATIC CONNECT IDENTIFIER 11-21
Miscellaneous New Data Guard Broker Commands: SET ECHO and SHOW ALL 11-22
Viewing Standby Redo Log Information in V\$LOGFILE 11-23
Viewing Standby Redo Log Information in V\$STANDBY_LOG 11-24
Viewing Standby Redo Log Information in V\$LOGFILE 11-25
Viewing Standby Redo Log Information in V\$STANDBY_LOG 11-26
Identifying Destination Settings 11-27
Viewing Standby Redo Log Information in V\$STANDBY_LOG 11-28
Viewing Redo Transport Errors by Querying V\$ARCHIVE_DEST 11-30
Evaluating Redo Data by Querying V\$DATAGUARD_STATS 11-31
Viewing Data Guard Status Information by Querying V\$DATAGUARD_STATUS 11-32
Monitoring Redo Apply by Querying V\$DATAGUARD_PROCESS 11-33
Monitoring SQL Apply by Querying V\$LOGSTDBY_TRANSACTION 11-34
Quiz 11-35
Summary 11-38
Practice 11: Overview 11-39

12 Configuring Data Protection Modes

Objectives 12-2
Data Protection Modes and Redo Transport Modes 12-3
Data Protection Modes 12-4
Maximum Protection Mode 12-5
Maximum Availability Mode 12-6
Maximum Performance Mode 12-7
Comparing Data Protection Modes 12-8
Setting the Data Protection Mode by Using Enterprise Manager 12-9
Setting the Data Protection Mode by Using SQL 12-12
Quiz 12-13
Summary 12-14
Practice 12: Overview 12-15

13 Optimizing and Tuning a Data Guard Configuration

Objectives 13-2
Monitoring Configuration Performance by Using Enterprise Manager Cloud Control 13-3
Optimizing Redo Transport Services 13-4
Setting the ReopenSecs Database Property 13-5
Setting the NetTimeout Database Property 13-6
Setting the DataGuardSyncLatency Property 13-7
Optimizing Redo Transmission by Using Redo Transport Compression 13-8
Compressing Redo Data by Setting the RedoCompression Property 13-9
Delaying the Application of Redo 13-10

Setting the DelayMins Database Property to Delay the Application of Redo 13-11
Using Enterprise Manager to Delay the Application of Redo 13-12
Optimizing SQL Apply 13-13
Adjusting the Number of APPLIER Processes 13-14
Adjusting the Number of PREPARER Processes 13-15
Tuning Automatic Outage Resolution 13-17
Diagnostic Tools in Active Data Guard (Read-Only) Standby Databases 13-18
AWR Unified Management Framework Topology 13-19
Remote Snapshot Configuration for ADG Database 13-20
Quiz 13-21
Summary 13-24
Practice 13: Overview 13-25

14 Performing Role Transitions

Objectives 14-2
Role Management Services 14-3
Role Transitions: Switchover and Failover 14-4
Buffer Cache Preservation During Role Change 14-5
Keeping Physical Standby Sessions Connected During Role Transition 14-6
Switchover 14-7
Switchover: Before 14-8
Switchover: After 14-9
Performing a Switchover by Using Enterprise Manager 14-10
Validating Databases for Switchover by Using DGMGRL 14-13
Performing a Switchover by Using DGMGRL 14-16
Preparing for a Switchover Using SQL 14-17
Performing a Switchover by Using SQL 14-18
Considerations When Performing a Switchover to a Logical Standby Database 14-19
Situations That Prevent a Switchover 14-20
Failover 14-21
Types of Failovers 14-22
Failover Considerations 14-23
Performing a Failover by Using Enterprise Manager 14-24
Performing a Failover to a Physical Standby Database 14-27
Performing a Manual Failover by Using DGMGRL 14-28
Re-enabling Disabled Databases by Using DGMGRL 14-29
Quiz 14-30
Summary 14-32
Practice 14: Overview 14-33

15 Using Flashback Database in a Data Guard Configuration

Objectives 15-2

Using Flashback Database in a Data Guard Configuration 15-3

Overview of Flashback Database 15-4

Configuring Flashback Database 15-5

Configuring Flashback Database by Using Enterprise Manager 15-6

Using Flashback Database Instead of Apply Delay 15-8

Using Flashback Database and Real-Time Apply 15-9

Using Flashback Database After RESETLOGS 15-10

Flashback Through Standby Database Role Transitions 15-12

Using Flashback Database After Failover 15-13

Automatic Propagation of Restore Points to All Standby Databases 15-14

Automatic Flashback on Physical Standby Databases 15-15

Quiz 15-17

Summary 15-19

Practice 15: Overview 15-20

16 Enabling Fast-Start Failover

Objectives 16-2

Fast-Start Failover: Overview 16-3

When Does Fast-Start Failover Occur? 16-4

Installing the Observer Software 16-5

Fast-Start Failover Prerequisites 16-6

Configuring Fast-Start Failover 16-7

Step 1: Specify the Target Standby Databases 16-8

Dynamically Change Fast-start Failover Target 16-9

Setting a Fast Start Failover Target Using NOWAIT Mode 16-10

Step 2: Set the Protection Mode 16-12

Step 3: Set the Fast-Start Failover Threshold 16-13

Step 4: (Optional) Set Additional Fast-Start Failover Properties 16-14

Setting the Lag-Time Limit 16-15

Configuring the Primary Database to Shut Down Automatically 16-17

Automatic Reinstatement After Fast-Start Failover 16-18

Configuring Automatic Reinstatement of the Primary Database 16-19

Setting a Connect Identifier for the Observer 16-20

Setting an Observer Override 16-21

Setting Observer Reconnection Frequency 16-22

Step 5: Configure Additional Fast-Start Failover Conditions 16-23

Configuring Fast-Start Failover Conditions 16-25

Step 6: Enable Fast-Start Failover 16-26

Configuring Fast-Start Failover in Observe-only Mode 16-27

- Step 7: Start the Observer 16-28
- Data Guard Broker Property: ConfigurationWideServiceName 16-30
- Multiple Observers Using a Single Configuration 16-31
- Master Observer and Backup Observers 16-33
- Starting Observers as Background Processes 16-34
- Step 8: Verify the Configuration 16-35
- Initiating Fast-Start Failover from an Application 16-36
- Viewing Fast-Start Failover Information 16-38
- Determining the Reason for a Fast-Start Failover 16-40
- Prohibited Operations After Enabling Fast-Start Failover 16-41
- Disabling Fast-Start Failover 16-42
- Disabling Fast-Start Failover Conditions 16-44
- Using the FORCE Option 16-45
- Stopping the Observer 16-46
- Performing Manual Role Changes 16-47
- Manually Reinstating the Database 16-48
- Using Enterprise Manager to Enable Fast-Start Failover 16-49
- Changing the Protection Mode and Disabling Fast-Start Failover 16-54
- Using Enterprise Manager to Disable Fast-Start Failover 16-55
- Using Enterprise Manager to Suspend Fast-Start Failover 16-56
- Moving the Observer to a New Host 16-57
- Quiz 16-58
- Summary 16-61
- Practice 16: Overview 16-62

17 Backup and Recovery Considerations in an Oracle Data Guard Configuration

- Objectives 17-2
- Using RMAN to Back Up and Restore Files in a Data Guard Configuration 17-3
- Offloading Backups to a Physical Standby 17-4
- Restrictions and Usage Notes 17-5
- Association and Accessibility of RMAN Backups 17-6
- Backup and Recovery of a Logical Standby Database 17-7
- Using the RMAN Recovery Catalog in a Data Guard Configuration 17-8
- Creating the Recovery Catalog 17-9
- Registering a Database in the Recovery Catalog 17-10
- Setting Persistent Configuration Settings 17-11
- Setting RMAN Persistent Configuration Parameters on the Primary Database 17-13
- Setting RMAN Persistent Configuration Parameters on the Physical Standby Database 17-14
- Setting RMAN Persistent Configuration Parameters on the Other Standby Databases 17-15

- Enabling Block Change Tracking on a Physical Standby Database 17-16
- Configuring Daily Incremental Backups 17-17
- Recovering from the Loss of a Data File on the Primary Database 17-19
- Using a Backup to Recover a Data File on the Primary Database 17-20
- Restoring and Recovering a Data File on the Primary Database Over the Network 17-21
- Automated Standby Synchronization from Primary Database 17-22
- Enhancements to Block Media Recovery 17-23
- Executing the RECOVER BLOCK Command 17-25
- Excluding the Standby Database 17-26
- Quiz 17-27
- Summary 17-29
- Practice 17: Overview 17-30

18 Enhanced Client Connectivity in a Data Guard Environment

- Objectives 18-2
- Connecting to the Appropriate Environment 18-3
- Understanding Client Connectivity in a Data Guard Configuration 18-4
- Preventing Clients from Connecting to the Wrong Database 18-5
- Managing Services 18-6
- Creating Services for the Data Guard Configuration Databases 18-7
- Connecting Clients to the Correct Database 18-8
- Creating the AFTER DB_ROLE_CHANGE Trigger for Role-Based Services 18-9
- Configuring Service Names in the tnsnames.ora File 18-10
- Configuring Role-Based Services Using Oracle Clusterware 18-11
- Adding Standby Databases to Oracle Restart Configuration 18-13
- Example: Configuring Role-Based Services 18-14
- Automatic Failover of Applications to a New Primary Database 18-15
- Client Failover: Components 18-16
- Data Guard Broker and Fast Application Notification (FAN) 18-17
- Automating Client Failover by Using Transaction Guard and Application Continuity 18-18
- What Is Transaction Guard? 18-19
- What Is Application Continuity? 18-20
- Data Guard and Application Continuity 18-21
- Using Application Continuity 18-22
- Configure Services on Single Instance Databases to Use Application Continuity 18-24
- Configuring Client: JDBC-Thin Driver 18-25
- Configuring Client: OCI Driver 18-27
- Configuring Client: ODP.NET Unmanaged Provider Driver 18-28
- Quiz 18-29
- Summary 18-32
- Practice 18: Overview 18-33

19 Patching and Upgrading Databases in a Data Guard Configuration

Objectives 19-2

Data Guard Standby-First Patch Apply 19-3

Upgrading an Oracle Data Guard Broker Configuration 19-6

Upgrading Oracle Database in a Data Guard Configuration with a Physical Standby Database 19-7

Upgrading Oracle Database in a Data Guard Configuration with a Logical Standby Database 19-9

Using SQL Apply to Upgrade the Oracle Database 19-10

Requirements for Using SQL Apply to Perform a Rolling Upgrade 19-11

Performing a Rolling Upgrade by Using SQL Apply 19-12

Identifying Unsupported Data Types 19-13

Case 1: Performing a Rolling Upgrade by Using an Existing Logical Standby Database 19-14

Performing a Rolling Upgrade by Using an Existing Logical Standby Database 19-15

Case 2: Performing a Rolling Upgrade by Creating a New Logical Standby Database 19-20

Case 3: Performing a Rolling Upgrade by Using a Physical Standby Database 19-21

Performing a Rolling Upgrade by Using a Physical Standby Database 19-22

Rolling Upgrades Using DBMS_ROLLING and Active Data Guard 19-27

DBMS_ROLLING: Concepts 19-28

DBMS_ROLLING: Overview 19-30

Database Rolling Upgrade: Specification and Compilation Stages 19-32

Example: Specification Stage 19-33

Example: Compilation Stage 19-34

Database Rolling Upgrade: Execution Stage 19-35

Rolling Upgrade Support for Multitenant Databases 19-36

Quiz 19-37

Summary 19-39
